PFAS-FREE SUGAR CANE RANGE

PFAS-FREE SINGLE-USE PACKAGING

In the future, PFAS compounds will only be permitted throughout the EU for applications deemed «essential» for society, i.e. where their use is currently unavoidable. The discussions have not yet reached their conclusion, but an EU-wide ban on PFAS in food packaging is to be expected in the near future. In our naturesse range, such PFAS additives are only used in our sugar cane products, if at all. We have recently developed a range of PFAS-free sugar cane items that complement our existing range.

What are PFAS?
Per- and polyfluorinated alkyl substances, PFAS for short, are a group of over 4700 synthetic chemicals. PFAS do not occur naturally and have only been manufactured since the late 1940s. Chemically, these organic compounds consist of carbon chains of different lengths in which the hydrogen atoms are replaced by fluorine atoms, either completely (perfluorinated) or partially (polyfluorinated).

Why are PFAS used in food packaging?
With their grease- and water-repellent properties, PFAS are often used as an additional functional barrier in food packaging. They allow containers filled with food to last longer than the untreated product.

Why the ban on PFAS?
Because PFAS are considered potentially harmful to health and the environment due to their very long half-lives, the EU is seeking to ban them in applications that are not essential to society. In Denmark, such a ban on food packaging has already been in force since 1 July 2020, and in Holland the PFAS ban was implemented on 1 January 2023, even before the EU decision. To date, there is no PFAS-free substitute that can provide the identical functional barriers for products made of sugar cane fibre. However, our new PFAS-free sugar cane items achieve almost equal functionality and are perfect for short-term use as sustainable disposable packaging.
